

Maths Home Learning

Non Website Ideas

Maths learning can be found in all areas of life. By taking part in everyday activities you could be supporting your child's maths learning by giving them practical activities grounded in real life experiences

Some ideas

-Baking- measuring and dividing ingredients

-DIY- measuring and converting units of measurement

-Time- reading the time, setting a timer for activities, thinking about differences in time between activities are all excellent activities. Possibly negotiating screen time?

-Board games- some board games are very maths rich (eg monopoly) but even simple board games like Guess Who or snakes and ladders contain maths and critical thinking opportunities.

-Card Games- These can be fantastic for number recognition or number skills.

White Rose

<https://whiterosemaths.com/homelearning/>

This is excellent, it's very scaffolded for the parents and easy to use.

Active Maths

We have a subscription to this and all parents can access the home learning activities for free as a result. We need to share this link with the parents so that they can access the activities.
